

ABSTRACT OF THE DISCLOSURE

A portable telephone set is disclosed which can issue a notification of whether an inputted key is valid or invalid readily with low power consumption without the necessity for 5 special hardware. If the power supply to the portable telephone set is turned on and then a key input through a key sheet is detected, then a control section refers to key allocation information to discriminate whether or not the inputted key is valid. If the inputted key is valid, then the control section 10 controls a speaker to generate first beep sound, but if the inputted key is invalid, then the control section controls the speaker to generate second beep sound different from the first beep sound.
